

# ProSep ASSEMBLY / FABRICATION SHOP

ProSep Technologies, Inc., has chosen a business model to provide you, our client, with the best of both worlds: the project control offered with a “captured” facility and the economies of outsourcing.

The ProSep assembly / fabrication site, located in northwest Houston, has a 16,000 square foot covered shop facility, 3,200 square feet of covered warehouse area, and substantial open laydown area. We operate the facility for the assembly of vessels, skids, and process packages, allowing us to have more direct control of project execution, schedule, and quality. Our close “hands-on” fabrication management, assembly / fabrication expertise, and the proven capabilities of our highly committed staff drive this successful model.

## FEATURES

Featuring a 30-foot eave height and a total lifting capacity of 50 tons with four cranes, ProSep’s assembly shop brings together the best in:

- Project execution and management
- Fabrication management
- Equipment packaging
- Quality assurance
- Schedule enhancement

## EXPERIENCE

Our shop personnel have experience with the fabrication, assembly and packaging of more than 50 skids through our current facility, pushing more than 800 tons of steel through the facility in one year. Thus far, the heaviest single package weighed more than 138,000 pounds, and the largest unit was 14’6” wide by 75’ overall length.

Our crew is committed to completing all projects in a timely manner, even to the extent of pulling off miraculous feats when necessary. As an example, we finished a complete crude processing train (consisting of a heated FWKO, thermal electrostatic desalter, and control skid for 16,000 BOPD at approximately 30% inlet BS&W) in under 18 weeks.

Contact the ProSep team, and we'll bring together the best for you.
