A LETTER FROM THE PRESIDENT & CEO

Greetings! 2009 will be a challenging year for our industry as it becomes increasingly important for producers to look for effective solutions to insure optimum production.

With the new year we launch a new suite of proprietary and traditional produced water applications. The upcoming expansion of our Houston production facility will allow us to support increasing activity and maintain our executional excellence. Our abilities to deliver improved efficiencies and reduce operational costs continue to make us an ideal partner for both onshore and offshore upstream producers. I look forward to our continued collaboration in 2009.

Jacques L. Drouin
